

Brain Injury Services

Priory provides specialised, high quality, rehabilitation-focused treatment programmes for those living with an acquired brain injury (ABI) or progressive neurological condition (PNC). We support individuals who require immediate post-acute support, active or slow stream rehabilitation, or continuing care. Our Brain Injury Services are delivered across 11 specialist sites throughout the UK.

Service overview

The service encompasses all aspects of neurorehabilitation, including:

- Physical
- Behavioural
- Cognitive
- Emotional
- Communication
- Social

Our diversity of care options allow us to provide expert treatment across the following areas:

- ABI rehabilitation
- Acute, active, slow stream and transitional neurorehabilitation
- Care for people with PNCs, including dementia and Huntington's disease

Our approach

Our treatment and rehabilitation programmes aim to maximise our service users' independence, quality of life and functional potential at any stage of their rehabilitation journey.

We include our service users, their families and carers in treatment and in developing individualised programmes of care.

Our treatment centres are designed to provide the optimum environment for rehabilitation. Services are provided in:

- Hospital settings
- Nursing home services
- Residential services
- Transitional living services

The breadth of the service allows our network to offer a comprehensive option of care pathways, ensuring that all services have consistency in their approach and follow national guidance.

Neurophysical care

- Highly specialist nursing
- Complex nutritional management
- Tracheostomy support
- Mechanical ventilation
